

Homework 3
Conservation Ecology
Summer 2009
50 points

Conserving your favorite species, habitat, or ecosystem

Conservation ecology often is a personal scientific discipline. People typically have species or habitats that have special meaning for them. Your task is to write a short essay identifying your favorite species, habitat, or ecosystem and explain why it is your favorite. If appropriate, be sure to include any conservation needs of the species. You may want to use Nature Serve (<http://www.natureserve.org/explorer/index.htm>) to help with conservation aspects of your favorite. Type and double space your essay.
